

HOW TO OPERATE YOUR BIB KEGERATOR

MATERIALS NEEDED

- Cold brew bag-in-box (BIB)
- BIB-compatible connector (V-Pull or Scholle)
- Dispensing system with tubing and faucet
- Sanitizer for cleaning

STEPS FOR LOADING AND TAPPING

1. PREPARE THE SYSTEM

Ensure the kegerator and all dispensing components are clean and sanitized.

Check that tubing and the faucet are properly installed and not clogged.

2. INSPECT THE BIB

Verify that the BIB is intact with no punctures or leaks.

Ensure the cold brew is chilled between 35–40°F.

3. LOCATE THE BIB CONNECTOR

Remove the perforated section on the box to access the bag's dispensing spout.

4. ATTACH THE BIB CONNECTOR

SCHOLLE

V-PULL

Scholle connectors: Slide the round connector over the spout and twist until it locks.

V-Pull connectors: Snap the connector onto the spout and twist the knob fully to secure.

Ensure a tight, leak-free connection.

5. PRIME THE SYSTEM

Press the red power button to turn on the pump.

Pull the tap handle immediately to fill the line and purge air.

If the pump times out, the red button will flash. Turn it off, then on to reset.

6. TEST THE FLOW

Dispense a small amount of cold brew to ensure a smooth, air-free flow.

7. SECURE AND ORGANIZE

Place the BIB inside the kegerator with easy access to the connection.

Arrange the tubing neatly, avoiding kinks.

Close the kegerator door securely.

TIPS FOR BEST PERFORMANCE

- Clean the lines regularly to maintain quality and prevent clogging

We recommend the Kegco BIB Cleaning Kits:

BIB CK - for BIBs with Scholle connector

Includes :

- 4 x 32-oz. bottles NowBrew BIB Coffee Dispense Cleaner
